Step 0: **Function Alignment**

Data $\{f_i\}_{i=1}^n$

Candidate **Parameters**

$$\{\lambda_\ell\}_{\ell=1}^L$$

Penalized Elastic Alignment

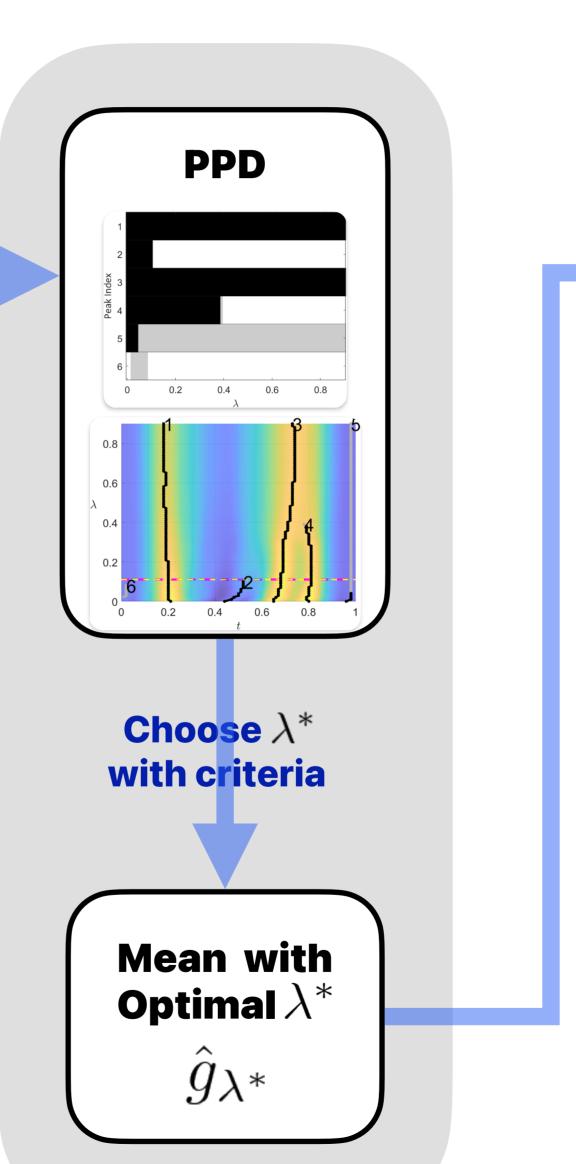

Aligned Functions

$$\left\{f_{\lambda_{\ell},i}^{*}\right\}_{\substack{\ell=1,\ldots,L\\i=1,\ldots,n}}$$

Partial Elastic Mean

$$\{\hat{g}_{\lambda_\ell}\}_{\ell=1}^L$$

Step 1: PPD Choose λ^*

Step 2: **Function Estimation**

Initialization of **Shape Est.**

 \hat{g}_{init}

Peak-Constrained **Function Estimation**

> **Final Estimate**
